The Cardinal Health™ Kangaroo™ Feeding Portfolio offers a safe, innovative and complete line of enteral feeding products for use across the continuum of care. The Kangaroo™ Feeding Brand has a long history of providing reliable and trusted products for clinicians and caregivers to optimize clinical efficiency. Our high-performing products are preferred by both clinicians and procurement professionals.*

Cardinal Health™ is committed to making enteral feeding safer across the continuum of care. The ENFit™ Connection System is designed to do just that, helping to reduce misconnections and prevent formula leaks. As you deliver enteral therapy to your patients, know that Cardinal Health is by your side, supporting you through the process of converting to the ENFit™ System with the reliable Kangaroo™ Feeding Products you can trust.

American Society of Parenteral and Enteral Nutrition (ASPEN) 2016 Clinical Guidelines†

ASPEN developed standards of practice for nutrition support. The clinical guidelines include the following:

- Nutrition support therapy in the form of early enteral nutrition (EN) should be initiated within 24 to 48 hours in the critically ill patient who is unable to maintain volitional intake.
- Enteral feeding protocols should be designed and implemented to increase the overall percentage of goal calories provided.
- Feeding tubes should be flushed with water after each feeding and medication administration, in between medications and every four hours during a continuous infusion.

* Customer Driven Growth Survey; March 2016:96-98.

The International Organization for Standardization (ISO) and the Global Enteral Device Supplier Association (GEDSA) have created a new standard design for enteral connectors known as ENFit™ Connectors. ENFit™ Connectors are intended to improve patient safety and decrease the risk of placing IV medicines in an enteral feeding device.
