

Syringe Caps and Connectors

B. Braun offers a variety of syringe caps and connectors designed to make syringe prefilling programs efficient and economical.

The SC-2000 and SC-3000 provide cap security with fully threaded Luer lock connections and shrouds. These features reduce the chance of tip breakage. Where additional quality control is needed, the TEC-1000 tamper-evident cap has a unique two-piece design that clearly indicates cap removal.

Ideal for larger syringe prefilling programs are the Luer slip Flexible Syringe Caps, which provide a secure fit to either Luer lock or Luer slip syringes. This SCF series, as well as the other syringe caps, was designed to guard the tip of the syringe from touch contamination.

Convenient packaging trays protect the sterility of unopened caps by allowing exposure of some or all of the caps at one time. B. Braun Syringe Caps are available in various colors for simple color coding of medications.

Syringe Caps and Connectors

Product Code	Reorder Number		
SC-1000 MULTI-AD® Syringe Cap	418010		Used for capping Luer tip syringes. Unique 10 per blister package protects sterility of unopened caps and aids in capping. Green, 50 packs (500 units) per case
